

Protect exterior components from
harsh outdoor environments with
ArmaTuff® exterior insulation

WARNING

May Cause
Premature Aging
of Exterior Ducts
& Equipment

Outdoor environments *don't* come with warning labels, but sun, wind, and pollutants do deteriorate exterior equipment surfaces, including ducts, vessels and piping.

Specifying ArmaTuff exterior insulation is one way engineers can protect the integrity of the systems they design.

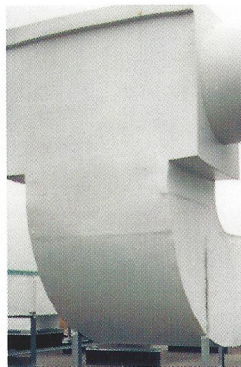

ArmaTuff provides superior protection against natural and man-made elements, including ultraviolet radiation, ozone, acid rain and industrial pollutants.

Closed-cell technology with 3 levels of laminated protection

All ArmaTuff products are made with world-famous Armaflex elastomeric foam technology. In addition to superior thermal performance, Armaflex' closed-cell structure is non-wicking, so it does not absorb or transfer moisture.

Engineers can select the ArmaTuff product with the weather-resistant laminate that best suits the application and budget.

ArmaTuff Plus protects from the elements and its closed-cell structure keeps moisture out.

ArmaTuff® Plus. The *most durable* of all ArmaTuff products, ArmaTuff Plus is ideal for installations where exceptional abuse, high UV and/or chemical exposure are a special concern.

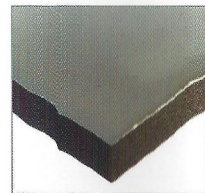

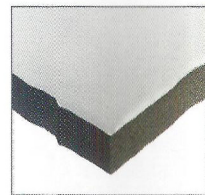

- Tough-as-metal laminate made of a 13-ply, UV-resistant membrane provides long lasting performance even under the harshest environments
- Exceeds most building insulation codes
- Comes with a 10-year membrane warranty against degradation due to ultra-violet radiation!

ArmaTuff® White. Durable and cost-effective, ArmaTuff White is suitable wherever harsh UV and chemical exposure are a moderate concern.

- Laminate made of a painted polymer and foil composite provides extra protection

ArmaTuff® Silver. If UV protection is desired, but chemical exposure and punctures are not special concerns, ArmaTuff Silver offers an economical solution.

- Metal foil laminate protects against breakdown of insulation due to UV radiation
- Silver surface reflects heat, reducing energy load and increasing efficiency

**No painting.
No pinning.
No problems!**

Each ArmaTuff product provides exceptional reliability without burdening your client with extra expensive installation or maintenance labor.

- No painting or jacketing required
- Flexible foam sheets make installation less cumbersome
- ArmaTuff laminate adds an additional vapor retarder to elastomeric material
- Optional self-adhesive backing keeps projects on the fast track
- Available in sheets or rolls, and a variety of thicknesses

**Better than
fiber board!**

**See & feel why
ArmaTuff is the best
exterior insulation for
your clients.**
